

The smarter, faster way to approve loans

Introducing NETSOL's AI decisioning module

Check is an AI-enabled credit decisioning engine designed to accelerate lending while keeping people firmly in control. It leverages deep reasoning, intelligent automation, and agentic workflows to deliver lightning-fast approvals while maintaining a human-in-the-loop approach for oversight.

The smarter, faster way to approve loans

1 Agentic reports

Automatically generate insights into assets and applicants with additional details and risk highlights.

2 Intelligent document processing

Automatically extract key financial data, calculate ratios, and detect mismatches, speeding up accurate and informed credit decisions.

3 Business rules

Define and automate your own credit policies using plain language, ensuring consistent, compliant decisions without manual effort.

4 Agentic finance structure

Automatically recalculate finance structures tailored to each applicant and aligned to your credit policies.

5 Creditworthiness

Leverage historical application data to uncover patterns and deliver sharper risk segmentation for more confident decision-making.

6 Transcend chat

Conversational chat for credit teams – ask AI questions, get instant insights and take action faster to boost productivity.

6 reasons to transform your underwriting

Seamless integration
without disruption

Automation for faster
decision making

AI document analysis
to reduce risk

Real time credit
insights

Tailored to your
own business rules

Human in the
loop oversight
